

## **Imagine Optic to exhibit at Laser World of Photonics China**

Orsay France, March 8, 2010 – As part of its assertive growth strategy, Imagine Optic, one of the world's leading manufacturers of adaptive optics and Shack-Hartmann wavefront metrology solutions, is proud to announce that it will be exhibiting at Laser World of Photonics in Shanghai from March 16-18, 2010. The company will be present on their own stand, Booth 6606, in the French Pavilion as well as on the stand of Luy Technology, Booth 6149.

During the 3-day event, Imagine Optic will be providing demonstrations of their HASO3 Shack-Hartmann wavefront sensor. "HASO3 wavefront sensors, combined with their companion software HASOv3, are the ideal choice for precision metrology applications including optical characterization, beam alignment and analysis, and, when combined with a deformable mirror or other phase modulator, adaptive optics" notes Mathieu Semenou, Sales Manager for the Asia/Pacific region.

When asked about Imagine Optic's strategy regarding the Chinese market, CEO Samuel Bucourt responded "China's phenomenal growth over the past decade has been fueled on one hand by a highly-educated, dynamic workforce and, on the other, by the exemplary quality of products produced there. It's also important to note that, on both the industrial and institutional sectors, China invests massively into cutting-edge R&D. The combination of accuracy, ease-of-use and versatility of our products will be a strong asset for users ranging from R&D to process control. Another important factor is that our unique expertise in wavefront analysis and adaptive optics will help customers get the most out of their investment because we can ensure that they are up and running quickly."

### More about Imagine Optic

Imagine Optic is Europe's foremost provider of high-precision Shack-Hartmann wavefront sensors and adaptive optics products. The Company was founded in Orsay France in 1996 to respond to the need for high-precision/wide-dynamic range wavefront metrology and adaptive optics products. Primary applications include high-power lasers, life-sciences microscopy, optical characterization and process quality control. Imagine Optic currently employs over 20 qualified professionals in a variety of fields and is represented internationally by its extensive distributor network.
