# OPTICAL ENGINEER COMPANION +

**Our family of products  
now teams up to support  
your optical metrology**

Compatible with the  
**Optical Engineer  
Companion** modular  
system: easily combine  
the accessories you  
need.

## CONFIGURATION

The OEC refers to a family of standard sensors and accessories that can be instantaneously combined to create the configuration you need for your optical tests.

Select the modules among:

a variety of  
metrology  
sources from  
UV to SWIR

1 a large range  
of HASO™ or  
LIFT wavefront  
sensors

2 several  
R-FLEX™  
illumination  
systems

3 a choice of  
R-FLEX LA™  
beam  
expanders

4

...and use them in combination or separately.

#1

### METROLOGY SOURCE: MS-λ

**MS-λ**  
400 - 1550 nm

Perfect-wavefront metrology  
source:  
+ Laser Diode or SLED

- + Monomode fiber
- + FC/APC output
- + Manual or remote (USB) control
- + Adjustable intensity output
- + Trigger input
- + Optical power: 5 mW

Reference	Wavelength (nm)
MS-405	405
MS-488	488
MS-520	520
MS-635	635
MS-785	785
MS-830	830
MS-1064	1064
MS-1550	1550
MS-CUSTOM	contact us for specific wavelength

#2

### WAVEFRONT SENSOR: HASO™ & LIFT

**HASO LIFT 680**  
680 x 504 phase points

**HASO LIFT 272**  
272 x 200 phase points

**HASO4 126**  
350 - 1100 nm

**HASO4 BROADBAND**  
350 - 1100 nm

**HASO4 FIRST**  
λ/100 RMS at custom wavelength

**HASO4 FAST**  
1.25 kHz

**HASO SWIR LIFT**  
160 x 128 phase points

**HASO SWIR**  
0.9 - 1.7 μm

#3

## ILLUMINATION SYSTEM: R-FLEX™

**R-FLEX2 VIS**  
400 - 1100 nm

**R-FLEX2 SWIR**  
1 - 1.7 μm

R-FLEX VIS and SWIR are illumination systems coupling our sources with our wavefront sensors for testing:

- + in double pass optical configuration
- + concave surfaces or refractive optics of any f/# choosing the appropriate focusing module (MOD F) below:

**Compact, lightweight, insensitive to vibrations and atmospheric turbulences, R-FLEX is easy to align onto the optics to be tested.**

It is the perfect solution for large telescopes, optics in vacuum chambers.

MOD CUSTOM					contact us for specific aperture, working distance, etc.									

All focusing modules have pupil imaging: the microlens array of the wavefront sensor is imaged at the infinity by the focusing modules

<sup>1</sup>Distance between the focal plane and the first mechanical interface of the module (with centering tool removed)

<sup>2</sup>Distance from the mounting interface of the module to the first mechanical interface of the module (with centering tool removed)

<sup>3</sup>Wavefront Error (wfe) at the output of the module for a circular pupil corresponding to the nominal f-number (f/#)

#4

## BEAM EXPANDER: R-FLEX LA™

**R-FLEX LA VIS**  
400 - 1100 nm

**R-FLEX LA SWIR**  
1 - 1.7 μm

R-FLEX LA VIS and SWIR are beam expander coupling our R-FLEX for testing:

- + in double pass optical configuration or single pass for large beam lasers
- + flat wavefront or surfaces of any diameter choosing the appropriate platform reference below:

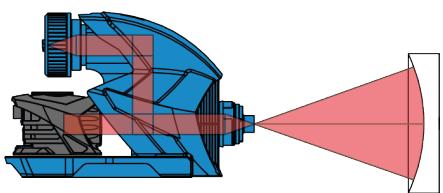

Reference	Test diameter (mm)	Spectral range
LA.30	30	VIS, SWIR
LA.50	50	VIS, SWIR
LA.75	75	VIS, SWIR
LA.100	100	VIS, SWIR
LA.150	150	VIS, SWIR
LA.200	200	SWIR
LA.CUSTOM	contact us for specific diameter	

**At wavelength, easy alignment and characterization of**

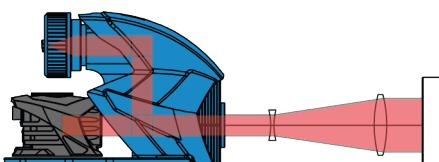

beam expanders  
filters, dichroic beamsplitter  
flat mirrors  
optical windows  
polarization scramblers.

## OPTICAL SETUPS

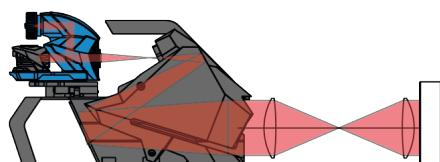

**Concave surfaces / refractive optics testing: use R-FLEX™**

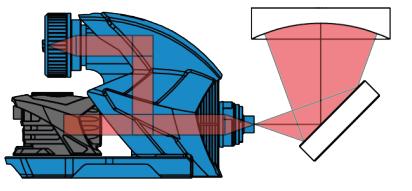

(Uncoated) Small to large concave mirrors

Beam expanders  
characterization and alignment

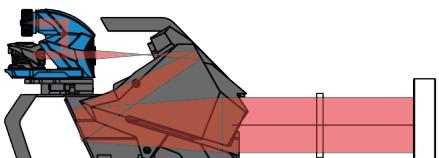

Beam expanders, afocal systems  
characterization and alignment

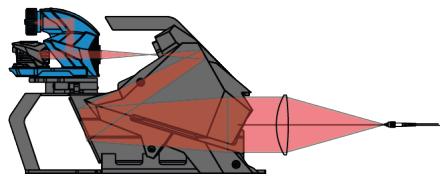

(Very) Large telescopes and collimators  
characterization and alignment

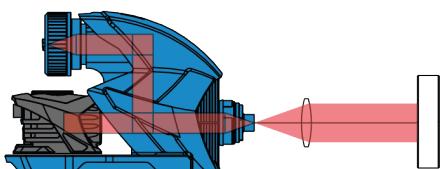

**Flat wavefront / surfaces testing:  
use R-FLEX™ + R-FLEX LA™**

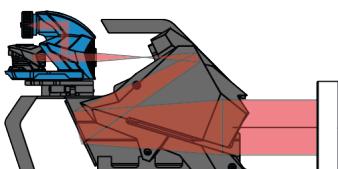

Filters, windows in transmission

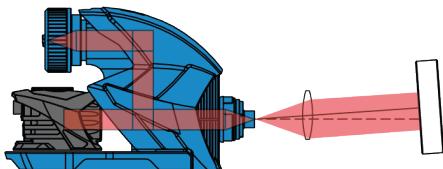

Collimated lasers and external sources

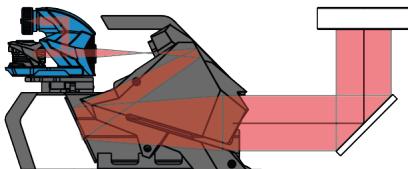

Lenses of any diameter, on-axis

Mirrors, filters in reflection

Lenses of any diameter, in the field

Head-Up displays, dichroics, beamsplitters
